

I dont believe that the Association of Broadcasters should have any right to dictate what services a company provides to it's subscribers. One of the key reasons I subscribe to XM radio is the traffic and weather. It is the only source where I can get that information during my work commute and travelling. When you live in a highly congested area like I do, it's a very important service for me that I use on a daily basis. Please stop NAB's petition 04-160!
